PROFESSIONAL SUMMARY

Python backend and full-stack developer who builds SaaS and AI products from architecture through deployment. Experience across FastAPI and Flask, REST APIs, JWT/RBAC, PostgreSQL, AWS, LLM applications, RAG, LangGraph, custom MCP integrations and workflow automation.

EXPERIENCE

AI Engineer & Full-Stack Developer | Edisolutions | May 2024 - Present

Condominium and building-management SaaS platform

- Designed and built an end-to-end SaaS platform, covering backend, frontend, third-party integrations and deployment.
- Implemented Python/Flask REST APIs with JWT authentication, role-based access control (RBAC), and per-tenant data isolation.
- Built a WhatsApp Cloud API self-service assistant for balance inquiries, PDF statements, issue reporting and emergencies.
- Integrated AWS S3 and a secure PDF proxy endpoint; managed AWS EC2, Nginx, SSL/HTTPS, custom domains and Alembic migrations.
- Resolved race conditions in a multi-worker production environment through idempotency guards and asynchronous background processing.
- Created pytest integration coverage for the bot's critical endpoints and contributed to product, UX/UI and monetization decisions.

SELECTED PROJECT

SecretarIA | *Personal AI product*

Multi-tenant AI virtual secretary for appointment booking, customer conversations and operational workflows.

- Architected a modular monolith with a FastAPI backend, Next.js/React frontend, PostgreSQL, Redis, Celery workers and Docker-based deployment.
- Built a LangGraph conversational runtime that combines LLM interpretation with deterministic tools for tenant-aware availability, booking and human handoff workflows.
- Integrated Anthropic and OpenAI model providers with model-routing, evaluation and benchmarking capabilities; kept authorization, calendar rules and state transitions outside the LLM boundary.
- Designed retrieval-first help and knowledge workflows, asynchronous embedding/indexing, and structured context visibility for agent responses.
- Implemented tenant isolation, secure sessions and CSRF protections, idempotent booking flows, audit records, durable outbox events and retryable asynchronous effects.
- Integrated Google OAuth, Calendar and Meet workflows; supported WhatsApp, Telegram and webchat channels, realtime SSE updates, notifications and operational error telemetry.

PROJECTS

Mueble Libre | *Personal full-stack project* | 2025

- Built an end-to-end used-furniture marketplace with Next.js, Prisma and PostgreSQL, including listings, authentication and relational data modeling.

TECHNICAL SKILLS

AI Engineering: LangGraph, OpenAI, Anthropic, LLM applications, prompting, RAG, retrieval, vector search (FAISS), MCP integrations, workflow automation, model evaluation, chatbot design

Backend: Python, FastAPI, Flask, REST APIs, Pydantic, SQLAlchemy, JWT, RBAC, Alembic, pytest, Celery

Cloud / DevOps: AWS EC2, AWS S3, Docker, Redis, Nginx, SSL/HTTPS, Linux, custom domains, asynchronous workers

Frontend: TypeScript, JavaScript, Next.js, React, TanStack Query, Tailwind CSS, HTML, CSS, PWA

Data and Integration: PostgreSQL, MySQL, SQLite, Server-Sent Events, Google OAuth, Google Calendar/Meet, WhatsApp Cloud API, Telegram, Git/GitHub

EDUCATION AND LANGUAGES

B.Sc. in Artificial Intelligence & Robotics | Universidad Empresarial Siglo 21 | March 2024 - Present

Languages: Spanish (Native), English (Intermediate - spoken and written), Portuguese (Basic)
